

# Procedure to change brake pads on 2 piston caliper ref: EA-01

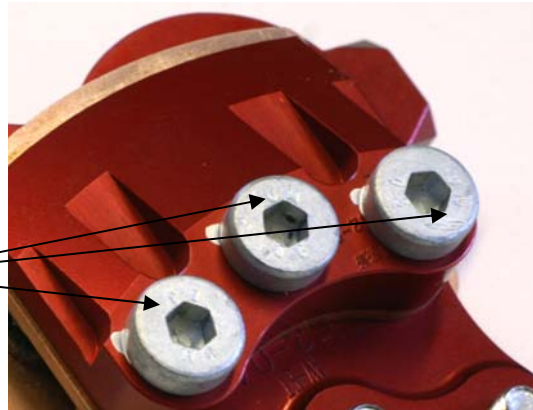

Dossier ref: MONT\_PADS\_1  
Equipment concern: caliper EA-01

Révision	Description	Date
0	Initial edition	12/09/2007

## 1. Remove the 3 screws M8

Heat the caliper to 60-80°C can help to remove the screws.

Screws to be removed

## 2. Clean around the pistons with a dry cloth

## 3. Push back the pistons with one finger (no force is needed).

If you cannot push back the piston with one finger, caliper must be checked and rebuilt.

## 3. Assemble the pads and back plate with crankcase

Put blue Loctite 243 on the end of each screw and all of them

Then torque to **25N.m** each screw (respect of torque value is very important).

Put a drop of white paint between each screw and back plate

**Torque to 25N.m  
(220 IN.LBS)**
